Propagation

The Weekly Solar Data chart plots Solar Flux Index (SFI), Sunspot number and Planetary K-Index for the past 8 days. With 8 Planetary K-index readings each day, only the minimum, average and maximum K-index values are plotted. **Note:** You may click [here](#) or on the chart above to see the same data for the past month.

The propagation data in this bulletin has been collected by KØCF from the following sources:

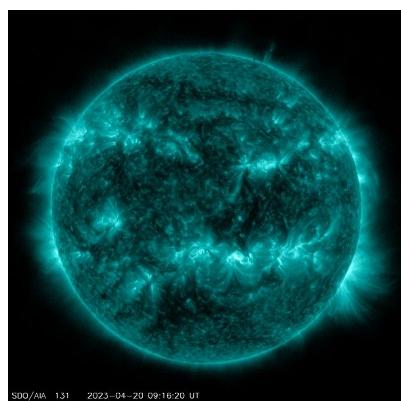

- Solar Flux predictions and Planetary K-index from NOAA Space Weather Prediction Center;
- Daily Solar Flux from Space Weather Canada;
- Sunspot numbers from WDC-SILSO, Royal Observatory of Belgium, Brussels.

The propagation graphs above are the creations of KØCF and are unique in space weather reporting.
